

My Butterfly

Journal

September 23, 2015

Day 1

Today my butterfly larvae arrived.

They were so still then one of

them moved. Almost all of them

are a centimeter long. The color

of them are black and a see

through yellow. They look like they

are pokey and pointy. All of their

names are: little Catie, Brownie,

Pointy, Cheesey, Points, Speck, Culty

and Bob. I can't wait to see them

grow to experiment on them,

while they are growing we are

going to.

Day 2

Today I learned that a caterpillar sheds its skin.

I also learned that a butterfly lays up to 1,000 eggs.

15
September 25, 2015 Day 3
I learned that the butterflies
also fly to California for winter.
I thought that they only flew
to Mexico. I also learned that
they travel from the Rocky
Mountains.

September 29, 2016 Day 7

I saw that my caterpillar grew because it ate a lot of food.

Now it is much bigger and it will get bigger by eating more food.

October 1st, 2015 Day 9

Some of my caterpillars are getting ready for their chrysalis! Mrs. Wacktal told us they form a j to make their chrysalis!

October 2, 2015 Day 10

My caterpillars are crawling up to the top, at least some of them are getting ready for their poupa. By Monday I think some of them will be in their poupa.

October 5, 2015 Day 13

Three of my caterpillars are in its chrysalis. One of my caterpillars is going to make a chrysalis, it is in its j form hanging. My other one is still growing it is not in its j form yet.

15
October 13, 2015 Day 21

Today two of my catipillers
have hatched from the poupa
and they are butterflys now.
Eighteen of the have hatched
in the class. We have nine of
them to hatch.

October 16, 2015 Day 24

Yesterday we let go our butterflys. At first it was hard to let them go. Then we kept one because it had twisted wings. If we didn't keep him he would of been bird food.
